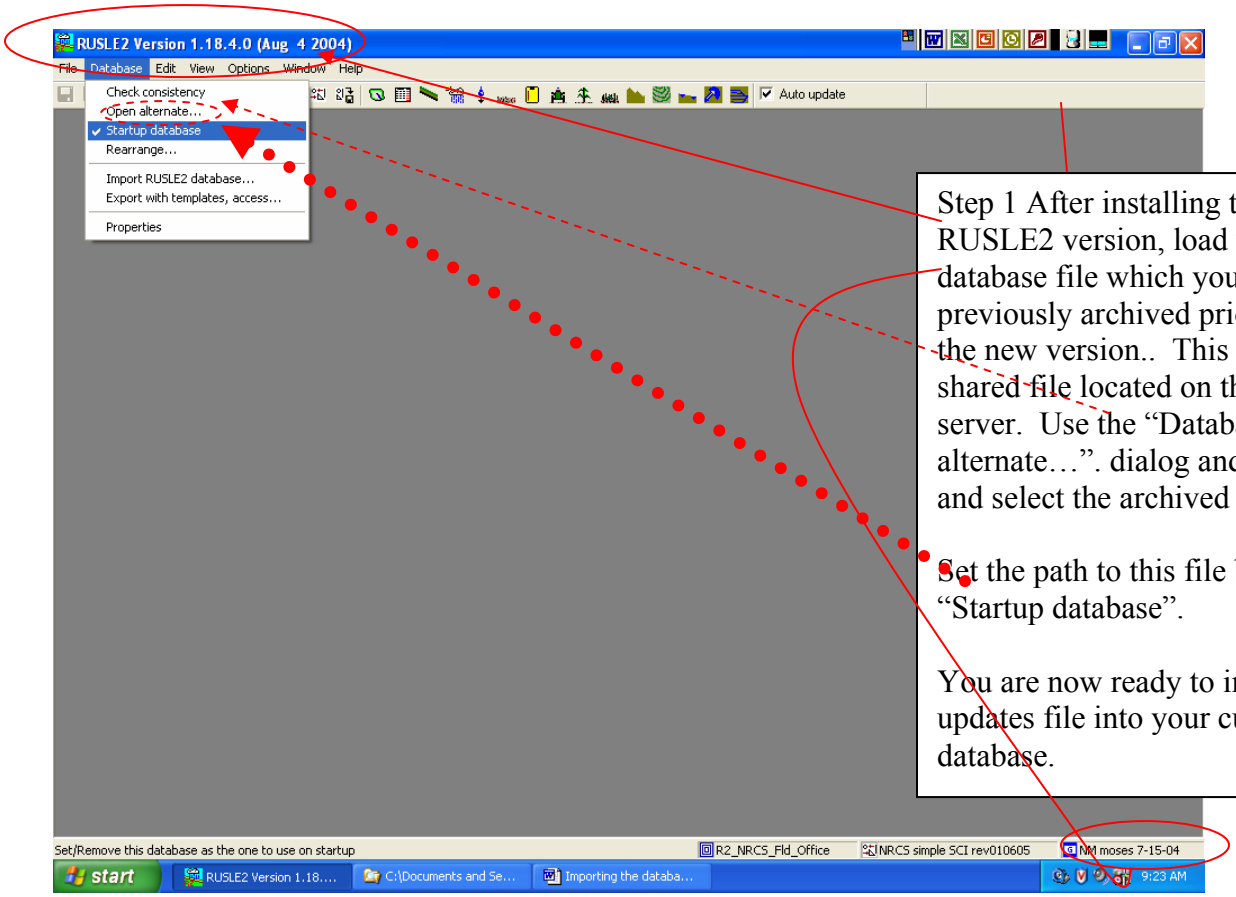
Importing the Database Update file into your Current Database.

If you have already installed the new RUSLE2 Aug 04 version skip to page 2.



Step 1 After installing the new RUSLE2 version, load your current database file which you should have previously archived prior to installing the new version.. This file may be a shared file located on the office server. Use the "Database/ Open alternate…". dialog and navigate to and select the archived database file.

Set the path to this file by clicking "Startup database".

You are now ready to import the updates file into your current database.

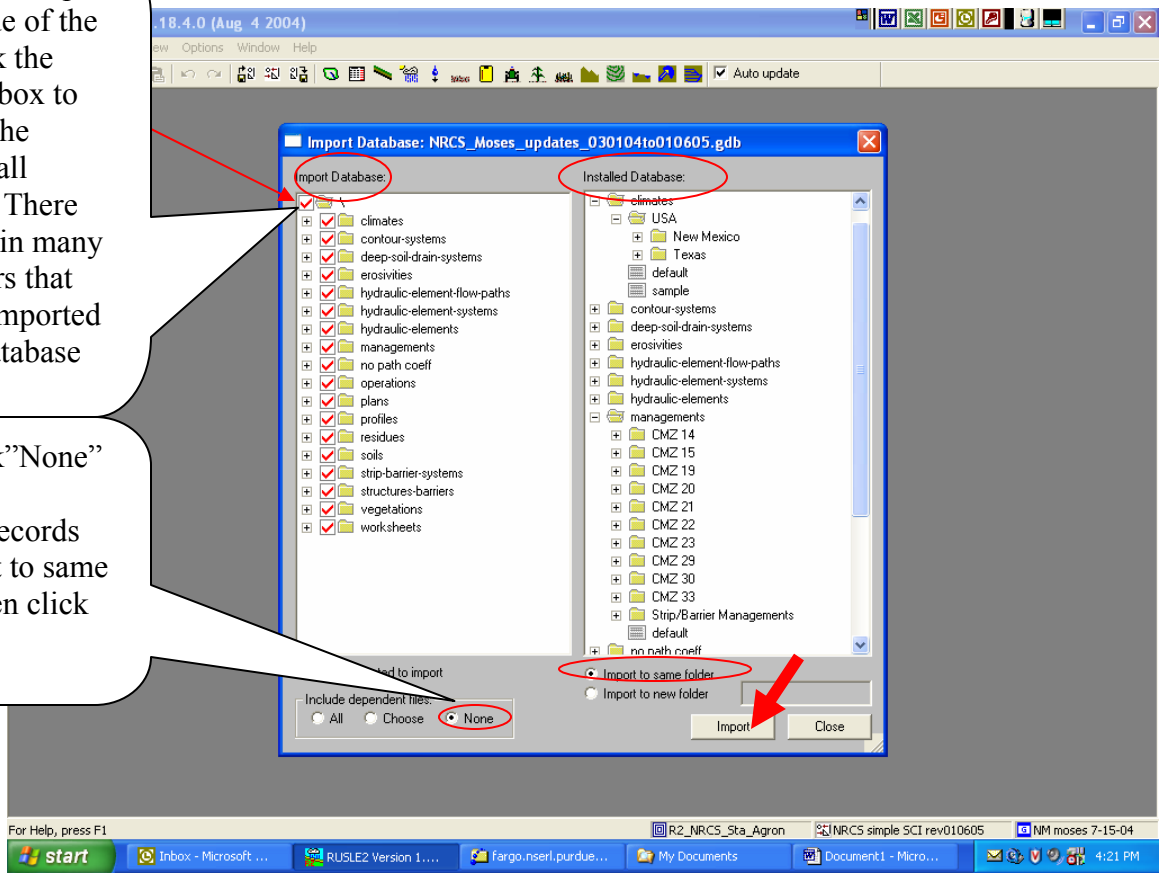
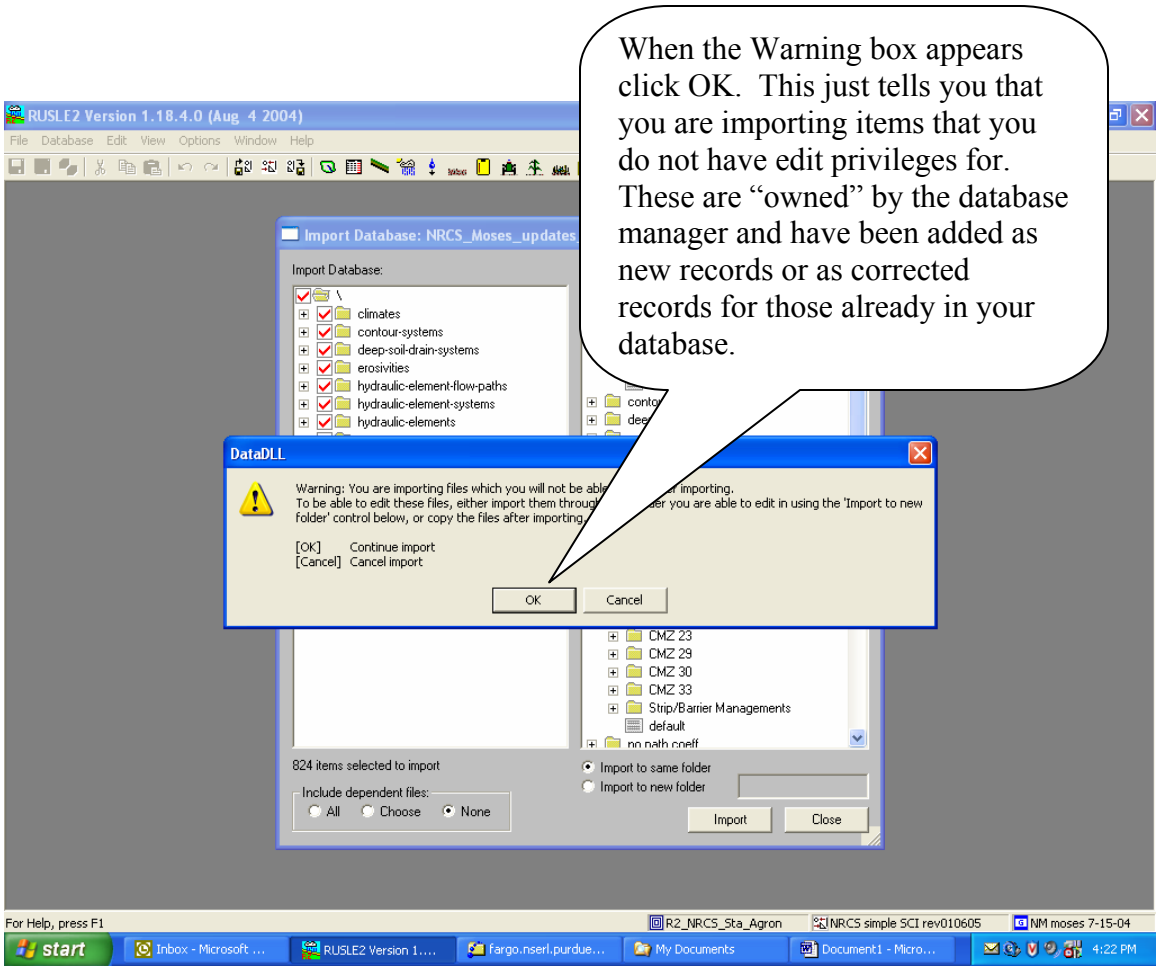
Step 3 Using the button with the up arrow, navigate to the folder where you saved the update file and select it.

Step 4 On the import database side of the screen, click the upper most box to auto select the contents of all subfolders. There are updates in many of the folders that need to be imported into your database

Step 5 Click"None" to select no dependent records and "Import to same folder", Then click "Import.





When the Warning box appears click OK. This just tells you that you are importing items that you do not have edit privileges for. These are "owned" by the database manager and have been added as new records or as corrected records for those already in your database.
